

ACCT-GB 4320 - EMPIRICAL RESEARCH FINANCIAL ACCOUNTING III

This course explores analytical models both in the financial and in the managerial accounting literature. The format is highly interactive; students study assigned papers in depth and present them in class. Analytical research design issues are emphasized. The linkages between the analytical models and the testing of their implications are elucidated. In this context, occasional empirical papers that test well-articulated analytical models & implications are also discussed.
