| Motivati | on | | | | | |

- ► Unprecedented rise in climate-related property damage.
- ► Yet economic activity in the riskiest areas continues to grow.
- Are financial markets providing the right incentives?

This paper:

- ► We identify key frictions in how insurance and mortgage markets interact with each other.
- ► We show distortions in:
 - ► Who bears risks and how they are priced.
 - How much credit flows to risky areas.

Background: Physical climate losses are distributed through connections in the mortgage market.

HouseholdsLendersInsurersGSEsHome EquityMortgage OriginationProperty DamageMortgage Purchase

Novel Data: Link county-level property insurance data to mortgages for Florida.

Background: Physical climate losses are distributed through connections in the mortgage market.

HouseholdsLendersInsurersGSEsHome EquityMortgage OriginationProperty DamageMortgage Purchase

Novel Data: Link county-level property insurance data to mortgages for Florida.

Key Friction: GSE insurer requirements are mis-calibrated \rightarrow GSEs accept risky insurers.

Main Findings

2. GSEs are more exposed to fragile insurers, due in part to strategic securitization by lenders.

1. Fragile insurers with inflated ratings now dominate insurance markets.

- 3. Fragile insurers amplify mortgage delinquency outcomes \rightarrow large taxpayer externality.
- 4. GSE policy increases credit supply in risky areas \rightarrow distorts adaptation.

| Outline | | | | | | |

Institutional Background and Data

Empirical results:

- ► Part 1: Insurance market trends.
- ▶ Part 2: Mortgage securitization: who is bearing risks?
- ► Part 3: Broader implications.

The distribution of physical climate risk

Climate losses are distributed through connections in the mortgage market.

Conclusior

The distribution of physical climate risk

▶ Insurers protect **collateral** value + prevent **default**; absorbed vast majority of the losses.

◆□▶ ◆□▶ ◆三▶ ◆三▶ ◆□▶ ◆□▶

The distribution of physical climate risk

• Banks sell loans to GSEs (e.g., Fannie Mae) \rightarrow GSEs rely on insurer **ratings** to assess eligibility.

The distribution of physical climate risk

Data

▶ If ratings are **high** enough, loans are eligible to be sold to the GSEs.

Conclusior

GSEs insurance requirements and pricing

► Homeowners insurance is **mandatory** to obtain a mortgage (all households, not just high risk).

< ロ > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

Conclusior

GSEs insurance requirements and pricing

- ► Homeowners insurance is **mandatory** to obtain a mortgage (all households, not just high risk).
- ► Differences in insurers' financial strength are **not priced** by the GSEs (g-fees).

Outline

Empirical results:

- ► Part 1: Insurance market trends.
- Part 2: Mortgage securitization: who is bearing risks?
- ► Part 3: Broader implications.

Introduction

Institutional background

1. Insurance market trends

2. Mortgage securitization

3. Broader implications

Conclusior

Demotech insurers have grown dramatically

(ii) Premium shares across counties

Sastry (Columbia), Sen (HBS) & Tenekedjieva (FRB)

6 / 21

Institutional background

1. Insurance market trends

2. Mortgage securitization

Demotech insurers have grown dramatically

Insolvency rates and Demotech FSRs

- Underwrite in riskier areas, less diversified, less capitalized, riskier reinsurance relationships.
- \blacktriangleright ~% of Demotech insurers go insolvent.

| | Demotech | Traditional |
|--------------|----------|-------------|
| No. insurers | 80 | 50 |
| Liquidated | 15 | 0 |
| % liquidated | 19% | 0.0% |

Note: We track liquidations between 2009 and 2022.

► A" and A' (Unsurpassed), A (Exceptional)

< 🗇 →

Conclusion

Demotech insurers receive inflated ratings

- ▶ 21% would not meet Fannie (blue line); 67% would not meet Freddie (red line).
- ▶ Insolvent insurers would not have been eligible for GSE securitization prior to their insolvency

| Introduction | Institutional background | Data | 1. Insurance market trends | 2. Mortgage securitization | 3. Broader implications | Conclusion |

イロト イロト イヨト イヨト ショウ クタウ

Explaining GSE exposures: insurer quality and borrower selection

- ► Two potential explanations for why we observe higher GSE shares:
 - 1. Causal effect of insurer quality: Lenders offload exposure to Demotech insurers.
 - 2. Borrower selection: Lenders reduce exposure to high risk borrowers, and high risk are insured by Demotech insurers.

Conclusion

Strong selection: Demotech insurers serve lower income households

Market shares by no. of policies

- ► Use coverage as a proxy for home value.
 - ► Lower coverage → Lower valued homes → Lower income households.
- Lower (higher) valued homes more likely to have Demotech (Traditional) insurers.
- Demotech has higher shares in what is likely the conforming market

Identifying causal effect of insurer quality

We address borrower selection using Citizens depopulation natural experiment.

- Citizens provides incentives to private insurers to assume policies.
- ▶ Program was large: >850K policies transferred to private insurers between 2009 and 2018.
- Demotech insurers dominate the depopulation program (39/40 participating insurers). Figure
- ▶ Participating insurers have higher insolvency rates and counterfactual AM Best rating ~C++.
- Advantage: Shift from a high quality to a low quality insurer for the same borrower.

Are mortgages more likely to be sold to the GSEs following a Depopulation?

Empirical approach

 $log(GSE)_{c,t} = \alpha + \beta log(Depopulated)_{c,t} + \gamma_c + \delta_t + X_{ct} \Gamma + \varepsilon_{c,t}$

 $GSE_{c,t}$: Dollar value of mortgages sold after the origination year to the GSEs in county c, year t. $Depopulated_{c,t}$: Policies transferred to Demotech in county c, year t. Details

Institutional features:

▶ Not all conforming mortgages are immediately securitized: only 50% sold within 3 months. Details

Identifying assumptions:

- 1. Declines in borrower quality do not correlate with the Depopulation schedule.
 - Schedule is pre-determined \rightarrow unlikely to coincide with changes in borrower characteristics.
 - Insurers unlikely to choose worse quality homeowners.
- 2. Nothing else about the Depopulated insurance contract changes (coverage, premiums).

Conclusion

Depopulation experiment shows banks offload counterparty risk

| | (1) | (2) | (3) | (4) |
|------------------------|-------------|-----------|-----------|-------------|
| | $\log(GSE)$ | log(GSE) | log(GSE) | $\log(GSE)$ |
| log(Depopulated) | 0.795*** | 0.929*** | 0.0343** | 0.0331** |
| | (0.0367) | (0.0346) | (0.0157) | (0.0162) |
| County FE | N | N | Y | Y |
| Year FE | N | Y | Y | Y |
| Controls | N | N | N | Y |
| Sample Period | 2009-2018 | 2009-2018 | 2009-2018 | 2009-2018 |
| Number of Observations | 619 | 619 | 619 | 618 |
| Adjusted R-squared | 0.580 | 0.762 | 0.974 | 0.974 |

 $log(GSE)_{c,t} = \alpha + \beta log(Depopulated)_{c,t} + \gamma_c + \delta_t + X_{ct} \Gamma + \varepsilon_{c,t}$

► Magnitudes: Average annual growth rate in takeouts 62% → GSE purchases ↑ by 1.8% (9% of average). Details

| Introduction | Institutional background | Data | 1. Insurance market trends | 2. Mortgage securitization | 3. Broader implications | Conclusion |
|--------------|--------------------------|------|----------------------------|----------------------------|-------------------------|------------|
| | | | | | | |

Outline

Empirical results:

- ► Part 1: Insurance market trends.
- Part 2: Mortgage securitization: who is bearing risks?
- ► Part 3: Broader Implications

| Introduction | Institutional background | Data | 1. Insurance market trends | 2. Mortgage securitization | 3. Broader implications | Conclusion |
|--------------|--------------------------|------|----------------------------|----------------------------|-------------------------|------------|
| | | | | | | |

Broader Implications

- 1. Effect on household welfare: serious delinquency
- 2. Taxpayer externality: quantifying GSE exposure (back-of-the-envelope)
- 3. Distorted adaptation: Too much credit supply

Conclusion

1. Delinquency event study around hurricane Irma

Hurricane Irma: Hit Florida in Sep 2017: > \$50bn in damages and significant insurer insolvencies.

Event study (difference-in-differences approach):

Serious Delinquency $\operatorname{Rate}_{c,t} = \beta_1(\operatorname{Post} \operatorname{Irma}_t \times \operatorname{logDamages}_c) + \beta_2(\operatorname{Post} \operatorname{Irma}_t \times \operatorname{Insolvent} \operatorname{Insurer} \operatorname{Share}_c) + \delta_c + \delta_t + \varepsilon_{c,t}.$

Variable definitions:

- Serious Delinquency $Rate_{c,t}$: 90 day+, foreclosure, REO.
- ▶ logDamages_c: property damages within 3 months after Irma.
- Insolvent Insurer Share_c: county's ex-ante exposure to insolvent insurers (premium shares) in the year before the storm.

Introduction Institutional background

und I

1. Insurance market trends

2. Mortgage securitization

3. Broader implications

Conclusion

1. Delinquency trends by exposure to hurricane Irma

- ► Serious delinquencies: 90+ DPD, foreclosures, REO.
- Exposed: Counties receiving Presidential disaster declaration. Back

Conclusion

1. Delinquency event study around hurricane Irma

| | Seriously Delinquent Rate | | | | | |
|---|---------------------------|--------------------------|----------------------|-----------------------|--------------------------|-------------------------|
| | (1) | (2) | (3) | (4) | (5) | (6) |
| Post Irma $=$ 1 $	imes$ Log Damages | 0.000919** (0.000345) | 0.000653** (0.000289) | | | 0.000635** (0.000294) | 0.000450* (0.000267) |
| Post Irma=1 \times Insolvent Insurer Shares | | | 0.106*** (0.0291) | 0.0760*** (0.0242) | 0.0853*** (0.0280) | 0.0612** (0.0241) |
| County FE | Y | Y | Y | Y | Y | Y |
| Year-Month FE | Y | Y | Y | Y | Y | Y |
| Number of Observations | 1250 | 3800 | 1250 | 3800 | 1250 | 3800 |
| Adjusted R-squared | 0.773 | 0.813 | 0.780 | 0.814 | 0.788 | 0.815 |
| Time Period | 9/2016- | 9/2016- | 9/2016- | 9/2016- | 9/2016- | 9/2016- |
| | 9/2018 | 12/2022 | 9/2018 | 12/2022 | 9/2018 | 12/2022 |
| | | | | | | |

- \blacktriangleright Surge in delinquencies after disasters, e.g., by ${\sim}20~bps$ in the average loss county.
- Delinquencies \uparrow further, e.g., by ~26 bps, where insurers are more fragile (average county).

Pretrends Dynamic treatment effect

Conclusion

2. Estimating GSEs' climate and insurance market exposures

Expected Losses =
$$\underbrace{\delta_B L G D_B}_{\text{Baseline}}$$
 + $\underbrace{P_H (\delta_{DIR} + \delta_{INS}) L G D_H}_{\text{Hurricane}}$.

► Approach: Extrapolate from the delinquency dynamics during Irma (CAT3/4 hurricane).

| | No hurricane | Hurricane |
|-------------------------------------|--------------|-----------|
| Probability ⁽¹⁾ | 73% | 27% |
| Default rate ⁽²⁾ | 1.2% | 1.7% |
| Loss given default ⁽³⁾ | 40% | 40% |
| Loan size | \$100 | |
| Expected loss | \$ 0.53 | |
| Expected loss (hurricane) | \$ 0.05 | |
| % losses (hurricane) | 9.6% | |
| Contribution of insurance fragility | 57% | |

▶ 10% of GSE losses are due to climate, due in large part to local insurance market fragility.

Sources: (1) CAT 3/4 hurricanes in FL. US National Hurricane Center (2023); (2) Our estimates; (3) An and Cordell (2019), E Survey of Content o

イロト イロト イヨト イヨト ショウ クタウ

Conclusion

3. GSE mortgage expansion in "Demotech" counties

- ▶ Mortgage lenders are more likely to deny jumbo loans in Demotech counties.
- \blacktriangleright Acceptance of Demotech by GSEs \rightarrow expansion of credit supply in the conforming segment.

| | Mortgage Denied (Y/N) | |
|--|-----------------------|-----------|
| | (1) | (2) |
| jumbo=1 | -0.0265* | -0.0279* |
| | (0.0152) | (0.0144) |
| Demotech Premium Share | -0.0166 | -0.0152 |
| | (0.0164) | (0.0161) |
| jumbo=1 $	imes$ Demotech Premium Share | 0.0526** | 0.0521** |
| | (0.0208) | (0.0201) |
| County FE | Y | Y |
| Year FE | Y | Y |
| Controls | N | Y |
| Number of Observations | 2,275,138 | 2,250,777 |
| Adjusted R-squared | 0.0112 | 0.0131 |

Conclusion and next steps

This paper: GSE insurance requirements are mis-calibrated \rightarrow growth of fragile insurers.

- GSEs bear large unpriced exposure to climate due to insurance risk \rightarrow taxpayer externality.
- Too much GSE mortgage origination in risky areas \rightarrow distorted adaptation.

Next steps:

► Optimal GSE policy: "pricing" in counterparty risk into g-fees.

Appendix

| | Homeowners insurance | Flood insurance |
|------------------------------------|------------------------------|--------------------------------------|
| 1. Who sells | Private sector | Government |
| 2. Coverage sold per year | >\$15 trillion | \$1 trillion |
| 3. % of losses (natural disasters) | 93% | 100% |

| 5. Take up | 85% | < 20% |
| 6. Mortgage requirements | Mandatory for all homeowners | Mandatory only in high risk zones |
| 7. GSE requirements | FSR based | N/A |

▶ Back

Demotech market share across US states

Counterfactual AM Best ratings of Demotech insurers

Step 1: AM Best rating replication model.

Mapping observable insurer characteristics to AM Best FSRs.

$$AMBFSR_{it} = \alpha + \beta \bar{\mathbf{X}}_{it} + \epsilon_i \tag{1}$$

- Choosing characteristics:
 - ▶ Literature: measures of insurers' risk and capitalization from Koijen and Yogo (2015).
 - ► LASSO regression.
 - AM Best factors from publicly available reports.
- ► Model explains ~ 60% of the variation in AM Best FSRs. Predictive model Distribution

Step 2: Predict counterfactual ratings of Demotech insurers

► For the last year an "A" or higher rating was assigned by Demotech.

$$\widehat{AMBFSR}_{DEM} = \widehat{lpha} + \widehat{oldsymbol{eta}} oldsymbol{X}_{DEM}$$

Construct confidence intervals numerically using bootstrapping. Back Note: 1,000 predicted values simulated for each model. Dots = average, bars = 90% confidence interval.

Demotech insurers dominate the depopulation program

- 40 insurers participate, of which 39 are Demotech.
- Participating insurers have higher insolvency rates and counterfactual AM Best rating ~C++.
- Depopulation: shift from a high quality to a low quality insurer.

Back

Citizens to Demotech policy flows

- ► Assumption: Policies transferred to Demotech insurers come from Citizens.
 - Challenge: we observe total transfers at an insurer-county-year level; not policy level data.
 - Almost one-for-one relation between policies transferred from Citizens to policies received by Demotech insurers

Back
