Discussion Bernales and Daoud (2010)

Discussion Bernales and Daoud (2010)

One sentence summary.

Discussion Bernales and Daoud (2010)

One sentence summary. Dynamic limit order equilibria generate more efficient re-allocations when some traders become informed,

Discussion Bernales and Daoud (2010)

One sentence summary. Dynamic limit order equilibria generate more efficient re-allocations when some traders become informed, not when they only have speed advantage in reconsidering their price quotes.

Discussion Bernales and Daoud (2010)

Discussion Bernales and Daoud (2010)

1. **Goettler, Parlour, and Rajan (JFE, 2009).** More private value realization when zero-alpha agents become informed.

Discussion Bernales and Daoud (2010)

1. **Goettler, Parlour, and Rajan (JFE, 2009).** More private value realization when zero-alpha agents become informed.
2. **Gains-from-trade decomposition neat.** Gains from trade = Waiting cost + Money transfer.

Discussion Bernales and Daoud (2010)

1. **Goettler, Parlour, and Rajan (JFE, 2009).** More private value realization when zero-alpha agents become informed.
2. **Gains-from-trade decomposition neat.** Gains from trade = Waiting cost + Money transfer.
3. **Endogenize technology acquisition.** As opposed to making a fraction of each alpha category a fast trader.

Discussion Bernales and Daoud (2010)

1. **Goettler, Parlour, and Rajan (JFE, 2009).** More private value realization when zero-alpha agents become informed.
2. **Gains-from-trade decomposition neat.** Gains from trade = Waiting cost + Money transfer.
3. **Endogenize technology acquisition.** As opposed to making a fraction of each alpha category a fast trader.
4. **Add HFTs.** As opposed to turning zero-alpha agents into HFTs.

Discussion Bernales and Daoud (2010)

1. **Goettler, Parlour, and Rajan (JFE, 2009).** More private value realization when zero-alpha agents become informed.
2. **Gains-from-trade decomposition neat.** Gains from trade = Waiting cost + Money transfer.
3. **Endogenize technology acquisition.** As opposed to making a fraction of each alpha category a fast trader.
4. **Add HFTs.** As opposed to turning zero-alpha agents into HFTs.
5. **Policy evaluation.**

Discussion Bernales and Daoud (2010)

1. **Goettler, Parlour, and Rajan (JFE, 2009).** More private value realization when zero-alpha agents become informed.
2. **Gains-from-trade decomposition neat.** Gains from trade = Waiting cost + Money transfer.
3. **Endogenize technology acquisition.** As opposed to making a fraction of each alpha category a fast trader.
4. **Add HFTs.** As opposed to turning zero-alpha agents into HFTs.
5. **Policy evaluation.**
   5.1 Latency restriction = Reduction speed treatment?

Discussion Bernales and Daoud (2010)

1. **Goettler, Parlour, and Rajan (JFE, 2009).** More private value realization when zero-alpha agents become informed.
2. **Gains-from-trade decomposition neat.** Gains from trade = Waiting cost + Money transfer.
3. **Endogenize technology acquisition.** As opposed to making a fraction of each alpha category a fast trader.
4. **Add HFTs.** As opposed to turning zero-alpha agents into HFTs.
5. **Policy evaluation.**
   5.1 Latency restriction = Reduction speed treatment?
   5.2 Optimal cancellation fee? Zero! Or specify cost of congestion.

Discussion Bernales and Daoud (2010)

1. **Goettler, Parlour, and Rajan (JFE, 2009).** More private value realization when zero-alpha agents become informed.

2. **Gains-from-trade decomposition neat.** Gains from trade = Waiting cost + Money transfer.

3. **Endogenize technology acquisition.** As opposed to making a fraction of each alpha category a fast trader.

4. **Add HFTs.** As opposed to turning zero-alpha agents into HFTs.

5. **Policy evaluation.**

    5.1 Latency restriction = Reduction speed treatment?

    5.2 Optimal cancellation fee? Zero! Or specify cost of congestion.

    5.3 Financial transaction tax?

Discussion Bernales and Daoud (2010)

1. **Goettler, Parlour, and Rajan (JFE, 2009).** More private value realization when zero-alpha agents become informed.
2. **Gains-from-trade decomposition neat.** Gains from trade = Waiting cost + Money transfer.
3. **Endogenize technology acquisition.** As opposed to making a fraction of each alpha category a fast trader.
4. **Add HFTs.** As opposed to turning zero-alpha agents into HFTs.
5. **Policy evaluation.**
   5.1 Latency restriction = Reduction speed treatment?
   5.2 Optimal cancellation fee? Zero! Or specify cost of congestion.
   5.3 Financial transaction tax?
6. **Price efficiency analysis.** Midquotes instead of transaction prices?
